Native, Local and Cultural Aspects

Human experience world through multiple senses.

AI systems should be capable of:

- **Answering questions** posed by native speakers in their own language (**Spoken/Text**).
- Process **Visual** information (what we're pointing at)
- Providing information using **Contextual knowledge** with cultural and situational understanding

Contextual Knowledge is not universal!

It is shaped by location, culture and language.

Everyday Multimodal Interaction

Why it is Important?

Everyday knowledge

LLMs should be adept at handling practical, real-world conversations that users engage in daily.

Local/Native Knowledge

Multimodal Depth

Speech, images, and text-based queries, allowing models to *interact* and *understand* spoken visual, linguistic content.

Enhancing LLMs

Facilitates the training and evaluation of specialized models on authentic, everyday user queries.

- **Close vs. Open Models:** Close models outperforms open models.

Multilingual Cultural Alignment

- **Capability Enhancement with Fine-tuning:** Fine-tuning (i) improves performance for extremely low resource languages (e.g., Assamese and Nepali), (ii) for medium resource languages, it helps dialect-rich languages like Arabic compared to other medium resource-languages (e.g., Hindi)
